canvasGUI 3

Action Event Information by Control Type

All events fired by canvasGUI controls generate an *event-info* object which is passed to the user defined action function. The information in event-info object depends on the control type.

Button

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript.

Image (button)

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript.

Checkbox

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript.
selected	true if the checkbox has been selected (ticked) else false

Option (button)

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript.
selected	true because this option button has been clicked

Slider

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript.
value	Current value of the slider
final	false if the user is still dragging the thumb or true if the thumb was released

Ranger

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript.
low	Current low value of the ranger
high	Current value of the slider based on its thumb position
value	Current value of the slider based on its thumb position
final	false if the user is still dragging one of the thumbs or true if the thumb was released

Knob

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript.
value	Current value of the knob
final	false if the user is still rotating the knob or true when the knob is released

Joystick

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript.
mag	In the range ≥0 and ≤1 depending on how far the joystick has been pushed from the rest position (center).
angle	The angle made by the joystick in the range from 0 to 2π. It is measured from the positive x axis and increments in the clockwise direction. In modes 'X4' and 'X8' the angle is constrained to the directions allowed by the mode.

dir	An integer that indicates the direction the stick is pushed. The values returned depend on the current mode-
	`5 6 7`
	`\ | /`
	`4 --- Z --- 0`
	`/ | \`
	`3 2 1`
	`Z is the dead zone value is -1.`
	`If control is in mode 'X0' or the joystick position is in the dead zone the value is -1`
	`'X0' : always -1`
	`'X4' : 0, 2, 4 or 6`
	`'X4' : 0, 1, 2, 3, 4, 5, 6 or 7`

dead	true if the joystick is in the dead zone else false
final	false if the joystick is still being moved and true when released

Viewer

Property	Description
source	A reference to the control handling the event
event	Always undefined
cX	The image pixel position (horz) that corresponds to the center of the view.
cY	The image pixel position (vert) that corresponds to the center of the view.
scale	the display scale

Side pane

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript.
state	'open' or 'closed'

Textfield

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript.
value	The text currently being displayed in the field
valid	true if the text is valid else false. If there is no user validation function then this is always true

Spinner

Property	Description
source	A reference to the control handling the event
event	A reference to the event generated by JavaScript or undefined
type	'ui' for user interaction events 'roll' or 'count' when the spinner has reached its target value
	'ui' events
reelIdx	The reel number being changed
digit	The digit '0' to '9' of the reel
value	The current value for the spinner
final	false if a reel is being changed else true
	'roll' or 'count' events
startValue	The value when the roll or count started
endValue	The value when the roll or count ends

Timer

Property	Description
source	A reference to the control handling the event
event	undefined.
